

# MEET THE NEW MODIO ONEVIEW LOOK AND EXPERIENCE

Our newly optimized OneView V2 dashboard brings a fresh look and experience to credentials management. Built to save you time, you will now be able to manage your team of providers more efficiently and accurately than ever before. Everything you know and love about OneView is still here (including all your data) but our OneView V2 revamped technology will open access to new features and capabilities.

# ONEVIEW V2 FEATURES

---

## **BULK LICENSE UPDATERS**

Save time by running team state, DEA, and controlled substance license updaters for up to 10 providers at once.

## **CUSTOMIZED CREDENTIALS DASHBOARD**

Customize and resize your columns by selecting what you want to view or hide. This will help you maximize your screen-space and let you focus on exactly what you need to see.

## **SET IT & FORGET IT**

Set alerts based on your own month range preference, meaning you can choose between a 1-6 month time frame for alert warnings. The system will remember your preferences.

## **SINGLE CLICK TO LICENSURE SITES**

There's a new magnification glass icon next to every provider license which will direct you to its respective primary source verification site in a single click.

## **SIMPLE DRAG & DROP**

Drag and drop documents directly to a line item with the new auto-file feature. Files will now be sorted into the appropriate document library. These documents can still be accessed from the Documents grid or within the documents tab of the record you dropped them on.

## **CLICK & DIRECTLY EDIT TEXT**

Directly click, edit, and add details to any line item without having to navigate into their respective credentialing sections. This will save you a ton of time since you can add credentialing information directly from one location.

## **ADDING NEW PROVIDERS**

Easily add providers to your team with OneView's enhanced integrations with multiple trusted data sources like LexisNexis.

## ADDITIONAL ONEVIEW V2 FEATURES

---

### **TAG IT!**

Tag individual line items to help with filtering and sorting.

### **ALERT PROMPTS FOR MISSING FIELDS**

Receive alert messages if a required (or even suggested) field is missing data when you're completing a line item. We will also check with you if you accidentally navigate away without saving so you don't lose valuable work.

### **DON'T USE IT? LOSE IT!**

You can now remove sections that you don't need on your dashboard.

### **CUSTOMIZED VIEWS**

Customize your columns by selecting what you want to view or hide, resize, and reorder within each grid. This will help you maximize your screen-space and let you focus on exactly what you need to see and where.

### **RED FLAG RISKS**

Bring attention to at risk items by adding flags and further filtering as needed. Rows will now be highlighted in red when flagged.

### **GROUP ALERT ACTIONS**

Eliminate a ton of clicks and save time with this new feature which lets you enable or disable alerts for up to 10 providers at once.

### **DOWNLOAD AND GO REPORTING**

Export reports to Excel, CSV, or PDF files. These exports will match the data in your grid - with custom columns and filters applied.

### **QUICKER FILE EXPORTS**

Download your providers' most recent and archived documents directly from any available line item. Also access all your providers documents in one place.

### **EXPANDED TEAM VIEWS**

Have multiple providers with multiple licenses? You can now load more items at a time without having to navigate to the next page.

### **ADDITIONAL WAYS TO TROUBLESHOOT**

Quickly spot and restore soft-deleted records in a grid with a single click. Adjust search criteria on the fly to address errors when using Carbon.

### **NEW CARBON INTEGRATIONS**

SAM was introduced in 2022 and additional integrations will continue to be added exclusively to OneView V2.

### **ACCESS TO AUDIT HISTORY**

Spot who changed the data on a record and when using the Audit History for each record. Simply click on the Last Updated date to compare prior records to current.

### **LIVE CHAT**

Your trusted Live Chat will still be available in OneView V2.
